

AUTODESK Build

Seamlessly collaborate with powerful, simple software

Autodesk Build is changing the way construction projects operate, by combining both robust project management capabilities and simple, yet powerful, field collaboration tools.

Connected Project Management

Keep the project on track with configured, streamlined and connected workflows like Issue to RFI to PCO. And with the ability to link nearly any reference - photos, issues, documents - understand the impact of changes, faster.

Flexible Cost Controls

Drive forecast accuracy and predictable cash flow with real time information. Improve cost control, improve visibility of cost-related risks, and forecast accurately by centralizing all cost activities in one platform.

Simple Field Collaboration

Make miscommunication a thing of the past and give the entire team visibility into live project information. With forms and issues, the whole team can contribute to quality and safety conformance.

Drive powerful Insights with connected data

Collaborate across your teams, projects and business

The Heart of Collaboration

Autodesk Build brings flexible project management workflows together with the most loved field collaboration software

Trust your software

Leverage easy to deploy and use software that is the trusted source of project data

Own your data

Support the overall project and own your own data, regardless if you're a Sub, GC or Owner

Use data your way

Create bridges between project data that you receive and create for a comprehensive view of project health

Turnover projects successfully

Collect data from one platform and closeout the project faster and get paid sooner

Stop making the same mistakes

Move from reactive to proactive with machine learning and cross product insights

See the whole problem

Connect design, issues in the field to project management tasks in the office

“

I like how Autodesk Build gives you the ability to cater individual workflows to your needs, so you're not inundated to information that isn't pertinent to you.”

Amy Kozlowski

Project Manager
Herrero Builders

“

The ability to go to one place to get my plans, my RFIs, my submittals... it is going to save a lot of time and effort”

John Mack

Virtual Design Department Manager
Dome Construction
